

RiMAP

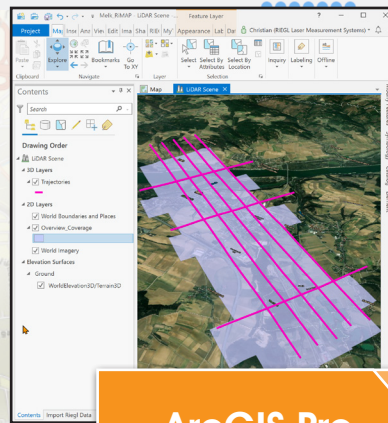

Esri ArcGIS Pro Add-In

RiMAP is a *RIEGL* software extension to Esri's desktop GIS application ArcGIS Pro. RiMAP leverages the GIS environment and tools to provide workflows to improve efficiencies for *RIEGL* customers who wish to analyze, store, manage, visualize, and/or share the information of their *RIEGL* kinematic LiDAR data collections.

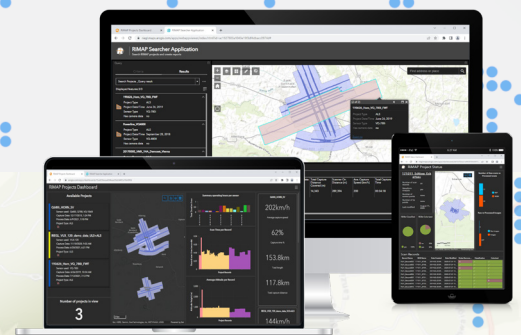

Acquisition metadata, including the parameters used and the processing state of LiDAR projects, are extracted and displayed in easy to manage web applications.

Ingest data to ArcGIS Pro

RiMAP parses RiPROCESS projects and imports metadata, processing state, and trajectory information into ArcGIS Pro. The data is stored in a chosen geodatabase and managed within the ArcGIS Pro environment.

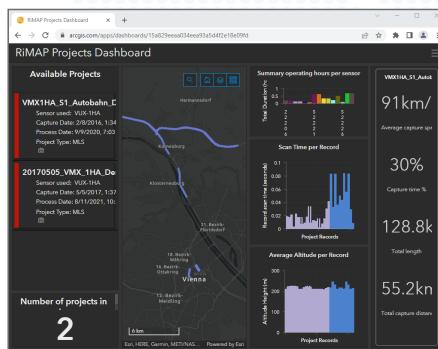

Publish to ArcGIS Online

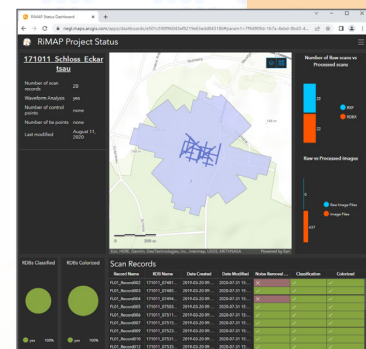

The geodatabase is published to ArcGIS Online along with a WebApp and two Dashboards for understanding, analysis, and visualization of RIEGL LiDAR data collections.
